

27 Project Profile

Client:
Greenhithe Retirement Village

Project Developer:
ASPEC Construction

Carpentry:
Mike Wallace Construction

Application:
20mm Timber Strapping to Block Walls

Reason for use:
Labour time saving and competitive cost per fixing.

Products used:
C4 Trak-It tool with over 7000 35mm C4 nails

New Powers C4 Trak-It gas powered concrete nailing tool “Hits the Richter Scale in New Zealand!”

Launched in September this year the first of the Powers C4 tools have hit the New Zealand construction market.

The latest technology in High Powered Concrete Gas Nailers the New Powers Trak-It C4 with 130 Joules of power has the capacity to shoot nails up to 65mm long into concrete, block and steel up to 5 mm thick.

Immediate interest from carpenters for applications such as fastening 45mm timber to concrete floors and the popular 20mm timber strapping to block walls is just the start for the many varied applications that will suit this powerful new tool.

The Powers Trak-It C4 is the only gas operated concrete tool in the global market with enough power level to compete with the demanding applications usually answered by Powder Actuated Tools, but with its cost effectiveness (1 gas cell will shoot over 500 nails) and speed (40 nails in the magazine) the interest and demand for this new system has been explosive.

Mike the owner of Mike Wallace Construction saw the immediate benefits of the Trak-It C4 Gas System with successful trials at Aspec Constructions Greenhithe Retirement Village project.

“With over 7000 nails to be shot I chose the Powers C4 Trak- It , as it turned out I halved my labour cost and reduced my per fixing cost, all up a much better system than explosive Powder Actuated and I will be using Trak-It C4 on my next contract for sure” commented Mike.

The Powers Trak-It C4 Tool is not only powerful, its quiet, has low recoil and each tool comes with two batteries that are also interchangeable with its older brothers the Trak-It C3 Tool Concrete Nailer (ideal for fastening metal trak to concrete and electrical and plumbing fittings) and the W3 Ex Timber Framing Gas Nailer .

A tradesman’s solution for most applications is achieved with the combination of these tools. Safe, fast, cost effective and easy to use the portable, durable, versatile Powers Trak-it C4 Gas Tool is the new market leading tool in Forced Entry Nailing Systems
